

TransiTec

ANLAGENBAU GMBH

Pneumatic conveyor Series S-WS

Pneumatic conveyor TransiTec

- For the conveying of granulate and dry powder products
- Large filtration surface
- Cleaning of the filter by air pressure
Cleaning of the filter by adjustable clearance
- High throughput
- Ideal for the conveying over long distances
- Application area: food and plastics industry
as well as in the sector of chemistry and environment.

Différent
filter sizes

Electrical control cabinet
with integrated freely
programmable steering
- setting of the suction time
- calibration of the filter cleaning.

Electrical control box and side channel
blower mounted on welded frame
- the frame is optionally mounted
on guide rolls with positioners.

Various filter sizes with suitable
face up to 10 m².

Removable top for filter cleanse
- with clamps for vacuum-tight closing.

One big product outlet nozzle
ensures a free and quick
emptying of the product
precipitation hopper.

Automatic filter cleaning after each
suction operation by means of
intermittent cleaning with compressed
air. A big compressed air storage vessel
ensures the adequate
impulse intensity.

The design of the pneumatic conveyor depends of the product which has to be conveyed., the conveying distance and the required throughput. The design occurs depending of the volume of the product precipitation hopper and depending of the throughput of the side channel blower.
